

## TO WHOM IT MAY CONCERN

### *Transportation of Ni-Cd Batteries in plywood boxes.*

We hereby confirm that our packaging technique is well adapted for transportation of Nickel-Cadmium Batteries.

The Battery box meets the following requirements:

- It complies with the valid IMDG regulation for Sea transport
- It complies with the valid ADR regulation for Road and Rail transportation.
- It complies with the valid ISPM regulation regarding protection against spread of vermin to other countries.
- It can be stacked up to 4 boxes during transport and storage.
- It is possible to open and reseal the box.

The battery box is customised especially for our batteries. The design is very rugged and will give the batteries protection inside the box. All boxes have been subject to comprehensive tests (according to ASTM 4169-8) at an independent laboratory.

We also confirm that all labels, marks and signs outside the boxes are in accordance with the IMDG code as well as our documentation.
